Digital India BHASHINI: Building the Future of Language AI

> *Explore how BHASHINI uses Language AI to promote multilingual digital inclusion, empower innovators, and strengthen India–Nepal cooperation in language technology and inclusive digital solutions.*

Digital India BHASHINI: Building the Future of Language AI

Syllabus Areas:

GS II - Governance

GS III - Science and Technology , Artificial Intelligence

The **Digital India BHASHINI Division (DIBD)**, under the **Digital India Corporation (DIC), Ministry of Electronics and Information Technology (MeitY), Government of India**, organised **"BHASHINI Shilpi"** at the **Embassy of India, Kathmandu, Nepal**, on **31 August 2026**.

The session brought together **developers, technology practitioners and innovators from Nepal** to explore how **Language AI** can be used to develop inclusive and multilingual digital solutions.

The "Develop → Solve → Scale → Innovate" Approach

An important takeaway from the programme is its four-stage approach:

Stage	Focus
Develop with BHASHINI	Build solutions using BHASHINI's technological resources
Solve with BHASHINI	Apply Language AI to real-world problems
Scale with BHASHINI	Move successful ideas beyond the initial stage
Innovate with BHASHINI	Develop new applications and approaches

The **"Innovate with BHASHINI"** segment encouraged participants to share ideas and explore how BHASHINI could help transform problems into **prototypes and scalable solutions**.

Why Language AI Matters

- **Breaks language barriers** in accessing digital services.
- Uses **AI-powered multilingual technology** to make digital technology more **inclusive, accessible and community-oriented**.
- Connects **Artificial Intelligence with linguistic inclusion**.

India–Nepal Language Technology Cooperation

- **BHASHINI Shilpi** strengthens India–Nepal cooperation in **Language AI**.
- Brings together **developers, academia and innovators**.
- Promotes **knowledge exchange, idea sharing and co-creation**.
- Aims to build a **cross-border ecosystem for inclusive digital solutions**.

Key Statistics about BHASHINI

According to the PIB release, the **Digital India BHASHINI Division**:

Indicator	Figure
Government websites powered	800+
Cumulative AI inferences	9 billion+
AI inferences processed daily	24 million+
Indian text languages supported	36
Indian voice languages supported	23
International languages supported	35

These figures highlight the scale at which BHASHINI is being positioned as a national platform for **AI-powered multilingual digital inclusion**.

Significance for Digital Public Infrastructure

BHASHINI represents an important dimension of India's digital transformation: **language accessibility**.

Digital infrastructure becomes more inclusive when citizens can interact with technology in languages they understand.

Therefore, Language AI can contribute to:

- Reducing linguistic barriers
- Improving accessibility of digital services

- Enabling multilingual interfaces
- Supporting technology adoption across communities
- Creating opportunities for local developers and innovators

BHASHINI is India's national platform for **AI-powered multilingual digital inclusion**.

Why is BHASHINI Shilpi Important?

1. From technology demonstration to technology creation: The programme does not merely showcase what Language AI can do. It encourages participants to build solutions themselves.

2. Focus on real-world applications: Participants explore actual problem statements and use cases.

3. Developer-centric approach: The programme provides developers and innovators with exposure to APIs and developer resources.

4. Encourages scalability: The objective is not restricted to prototypes; participants are encouraged to think about scalable solutions.

5. Promotes multilingual inclusion: Language technology can help make digital services accessible across linguistic communities.

6. Strengthens India–Nepal cooperation: The programme creates a platform for technological collaboration between the two countries.

BHASHINI uses Language AI to overcome linguistic barriers and make digital technology more inclusive. Its collaboration with Nepal can help build a stronger **cross-border ecosystem for multilingual AI innovation**.
