Pradhan Mantri Janjatiya Vikas Mission (PMJVM)

Syllabus Areas:

GS II - Governance

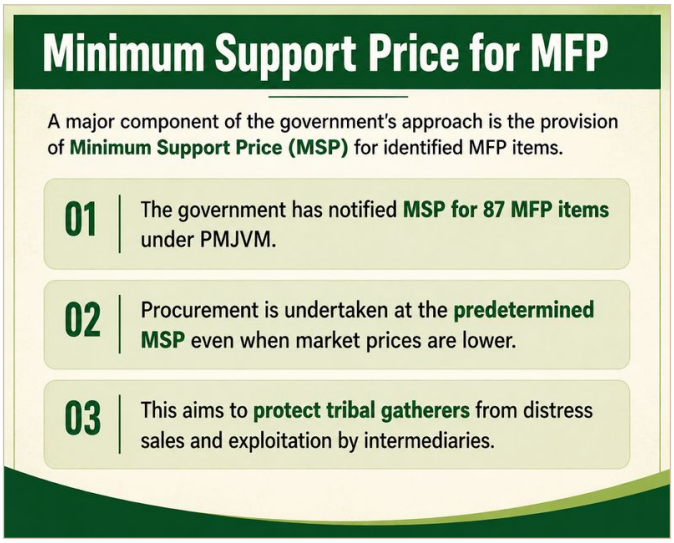

GS III - Economy

Unlocking India's Tribal Forest Economy

The **Pradhan Mantri Janjatiya Vikas Mission (PMJVM)** is a Government of India initiative aimed at improving the livelihoods and economic empowerment of tribal communities by strengthening the value chain of **Minor Forest Produce (MFP)**. The mission seeks to move tribal communities from being raw-produce collectors to **community-owned entrepreneurs** involved in processing, value addition and marketing.

Why is PMJVM Important?

- India has around **10.4 crore Scheduled Tribes**.
- Many tribal households derive around **20–40% of their annual income from Minor Forest Produce (MFP)**.
- Important MFPs include **honey, tendu leaves, mahua flowers, tamarind, lac, bamboo and wild herbs**.
- Traditionally, tribal gatherers often sold these products to intermediaries at low prices, receiving only a fraction of their actual market value.
- PMJVM attempts to address this by improving **technology, processing, value addition, market access and price realisation**.

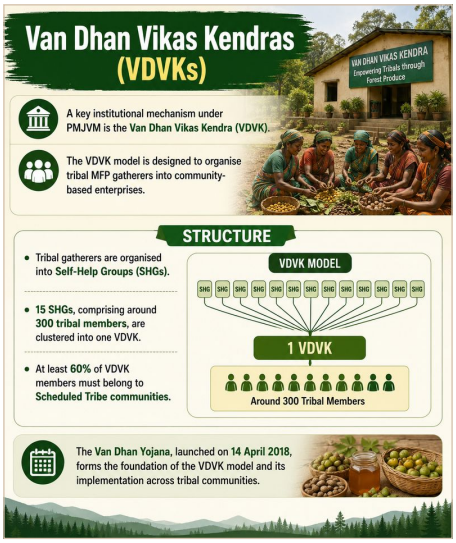

Role of TRIFED

The **Tribal Cooperative Marketing Development Federation of India (TRIFED)** is responsible for marketing and development of tribal products.

TRIFED purchases MFP at predetermined MSP through a network of state-level implementing agencies, including tribal development cooperatives and forest development corporations.

Since **2013–14**, state governments have procured **2,67,954 metric tonnes of MFP worth Rs. 693.98 crore** under the scheme.

Marketing & Market Linkages

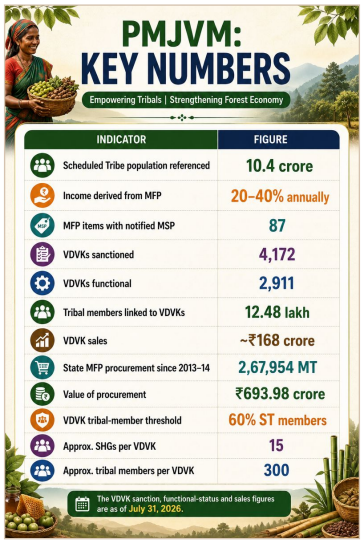

VDVKs function not merely as processing centres but also as **market-linkage centres**.

Important interventions include:

- Establishing VDVKs around **local Haat Bazaars**, which serve as important MFP procurement points.
- Modernising tribal haats with permanent structures, storage, drinking water, shade and weighing facilities.
- Partnerships with private entities and non-profits for value addition and marketing.
- Providing market intelligence, including **daily prices and e-commerce opportunities**.
- Branding and promotion of tribal products through **festivals, exhibitions and artisan melas**.
- Geo-tagging of VDVKs and other scheme assets.
- Supporting **Geographical Indications (GI)** for tribal products.
- Building and upgrading **IT and e-commerce platforms**.

- Providing research and development support.

The document notes that there are **over 5,000 haats in tribal areas**, highlighting the importance of local markets in the tribal forest economy.

Support Provided to Tribal Communities

- **Skill Development:** Training in scientific harvesting, sustainable collection, processing, value addition, packaging and enterprise development.
- **Infrastructure Support:** VDVKs receive infrastructure support at beneficiary homes, government buildings or Gram Panchayat buildings.
- **Processing Equipment:** Support for cutting, sieving, decortication, drying and packaging equipment based on locally available MFPs.
- **Working Capital:** Financial linkages with banks, financial institutions and **NSTFDC** facilitate working capital for tribal enterprises.
- **Storage & Transportation:** VDVKs receive **storage and transportation facilities on a rental basis**, strengthening the movement of processed MFPs to markets.

PMJVM and Tribal Women Empowerment

- One of the important outcomes highlighted in the backgrounder is **women's economic empowerment**.
- The document notes that much of the collection and sale of MFP is carried out by women, making VDVKs an important instrument for strengthening their financial independence.
- **Case Study: Nyigamane, Ho Yorbe, Medumhadgum VDVK**
- The VDVK in **Leparda district of Arunachal Pradesh** was established in **October 2021** with **300 women SHG members and farmers**.

This model has helped participating women move beyond dependence on seasonal agricultural income and become stakeholders in the **brand and enterprise itself**.

PMJVM: From Welfare to Empowerment

The backgrounder presents the evolution of tribal forest-economy interventions as a shift towards **economic empowerment**:

- **PESA, 1996:** Gram Panchayats receive governance and ownership rights over minor forest produce.
- **Forest Rights Act, 2006:** Forest-dwelling communities gain legally recognised rights to collect, use and sell MFP.
- **MSP for MFP:** Addresses distress sales and market failures.
- **Van Dhan Yojana, 2018:** Introduces collective processing, value addition and marketing through VDVKs.
- **PMJVM, 2021–22:** Integrates these interventions with broader institutional and livelihood support.

Significance for Tribal Development

PMJVM represents a shift from merely supporting the **collection of forest produce** towards creating an integrated tribal enterprise ecosystem.

Its approach combines:

Forest resources !’ Community ownership !’ SHGs !’ Processing !’ Value addition !’ Branding !’ Market access !’ Higher incomes

This can help:

- Reduce dependence on intermediaries.
- Improve price realisation for tribal producers.
- Create local employment.
- Promote sustainable harvesting.
- Encourage community-owned enterprises.
- Strengthen tribal women's economic participation.
- Connect remote tribal producers with national and digital markets.
- Promote locally sourced and forest-based products.

The overall objective is to develop a **sustainable forest economy** that balances community ownership with market competitiveness.
